

[Systemic Characteristics of the Case Study Cities](#) [1]

This report details the initial phase of Work Package 5 that focuses on modelling and quantifying the environmental and socio-economic impacts of the 2050 visions compared to business as usual. The first task involves the application of a participatory systems analysis tool with the aim of identifying significant factors that are important for the quantification. The report contains reports and analysis from 8 of the 10 case study cities of POCACITO.
